Technical Documentation

VXSBill Interface - Transaction Rebill

VXSBill Interface

The options explained in this document:

- 1) How to create a transaction and check on the status
 - 2) How to create a refund
-
- A) Country code table
 - B) PHP example on how to create a re-bill transaction
 - C) PHP example on how to check the transaction status
 - D) PHP example on how to create a refund

Attention: The IP (range) of the server that calls our application needs to be registered in VXSBill.

1) How to create a transaction and check on the status

This is a two step process.

Step 1 : Create the transaction. (Re-billing)

Step 2 : Check the status of the transaction.

Only a blacklist check is done when creating a transaction, because the AVS check is done separately.

Please contact us if you are going to store the credit card information in the local database. We advise not to do so, because you need to be PCI approved.

Please note that you have to check the status of the transaction until the transaction has reached its final status (Approved or Declined). This can take some time, so checking 3 or 4 times is not enough!!

Most transactions are processed within 10 seconds, but transactions can take much longer. This happens in case the issuer, the internet, the bank network or VXSbill has problems processing the transaction. We will retry until we get the "approved" or "declined" feedback from the issuer.

Step 1:

URL https://secure.vxsbill.com/create_transaction.php3

Input fields	Type	Description
username	Mandatory	Your username of the VXSbill platform
password	Mandatory	Your password of the VXSbill platform
site	Mandatory	Your site id of the VXSbill platform
package	Mandatory	Your package id of the VXSbill platform
trans_id	Mandatory	The transaction_id of the initial transaction
expire_month	Optional	Expiry month of the credit card (mm)
expire_year	Optional	Expiry year of the credit card (yyyy)
cvcode	Optional	CVC of the credit card (3 digits)
price	Mandatory	Price in cents WITHOUT dots or commas (10 Euro=1000)

Output fields	Description
Error: Temporary unavailable.	Your IP has not been verified yet, please contact our support desk
Error: Access denied.	Your IP has not been verified yet, please contact our support desk
Error: DB	Database problems, please contact our support desk
Error: Insert	Database problems, please contact our support desk
Error: Blacklisted	The card is blacklisted
Error: Expiry	Invalid expiry
Error: Price	Invalid price
Error: Transaction not found	The initial transaction is not found
OK: transaction_id	The transaction is created. The transaction_id is a unique ID that identifies the transaction

Step 2:

URL https://secure.vxsbill.com/check_transaction.php3

Input fields	Type	Description
trans_id	Mandatory	The transaction_id returned by create_transaction
format	Mandatory	The return format. Always 1.

Output fields	Description
Error: Temporary unavailable.	Your IP has not been verified yet, please contact our support desk
Error: Access denied.	Your IP has not been verified yet, please contact our support desk
Error: DB	Database problems, please contact our support desk
Error: Transaction not found.	The transaction could not be found.
OK: status: message	The status is a numeric value that indicates the status of the transaction and message returns the text.

Possible status return values:

100 Approved
101 Declined
< 99 Pending

Possible message return values:

Approved
Refer to issuer
File is temporarily unavailable
Pick up card
Pick up card – Lost
CVC2 incorrect
Already reversed at switch
Can not verify PIN
Cashback limit exceeded
Verification error
Do not honor
Exceeds issuer withdrawal limit
Invalid service code, restricted
Violation, cannot complete
General error
Destination not found
No account
Cardholder black-listed
No checking account
No savings account
PIN tries exceeded
Security violation
Transaction not permitted – Terminal
Invalid merchant ID
CVV2 value supplied is invalid

Pending
Refer to issuer - Special condition
Issuer or switch is temporarily unavailable
Pick up card - Special condition
Pick up card - Stolen
Verification error
Invalid amount
Invalid creditcard number
Cashback service not available
Invalid date
Insufficient funds
Exceeds withdrawal limit
Activity limit exceeded
Cryptographic error
Expired card
Invalid transaction
Unable to backout transaction
Inconsistent data
No credit account
No such issuer
Re-enter transaction
Transaction not permitted - Card
System mailfunction
Incorrect PIN
Syntax error

2) How to create a refund

URL https://secure.vxsbill.com/create_refund.php3

Input fields	Type	Description
username	Mandatory	Your username of the VXSbill platform
password	Mandatory	Your password of the VXSbill platform
site	Mandatory	Your site id of the VXSbill platform
trans_id	Mandatory	The transaction id returned by create_transaction
price	Optional	Price in cents WITHOUT dots or commas (10 Euro=1000) If the price is zero a full refund is done.

Output fields	Description
Error: Temporary unavailable.	Your IP has not been verified yet, please contact our support desk
Error: Access denied.	Your IP has not been verified yet, please contact our support desk
Error: DB	Database problems, please contact our support desk
Error: Not found.	The transaction is not found
Error: Already refunded	The transaction is already fully refunded. A refund is not needed
Error: Already charge backed	The transaction was charged back. A refund is not allowed
Error:	General error creating the refund
OK: refund_id	The refund is created. The refund_id is a unique ID that identifies the refund

B) PHP example on how to create a re-bill transaction

```
<?
    $username = "";
    $password = "";
    $site = 1;
    $package = 1;
    $trans_id = 1;
    $price = 200;

    $result = "";

    $request =
"https://secure.vxsbill.com/create_transaction.php3?username=$username&password=$password
&site=$site&package=$package&trans_id=$trans_id&price=$price";

    if ($fp = fopen($request, "r")) {
        while (!feof($fp)) {
            $result .= fgets($fp, 128);
        }
        fclose($fp);
    }
    if (strlen($result) == 0) {
        echo("No reply");
    }
    if (strstr($result, "Error")) {
        echo("Error: $result");
    }
    if (strstr($result, "OK")) {
        $trans_id = substr($result, 4);
        echo("OK: $trans_id");
    }
?>
```

C) PHP example on how to check the transaction status

```
<?
    $id = 12345; /* Transaction id */

    $result = "";

    if ($fp =
fopen("https://secure.vxsbill.com/check_transaction.php3?trans_id=$id&format=1", "r")) {

        while (!feof($fp)) {
            $content = fgets($fp, 128);
        }

        fclose($fp);
    }

    if (strstr($content, "OK:")) {

        $result = explode(":", $content);

        $status = trim($result[1]);
        $message = trim($result[2]);

        /* Status:
        <99 Pending
        100=Approved
        101=Declined
        102=System failure
        */

        echo("Status: $status, Message: $message");
    }
    else {
        echo("Error: Check failed");
    }
?>
```

D) PHP example on how to create a refund

```
<?
    $username = "";
    $password = "";
    $trans_id = 12345;
    $site = 1;
    $price = 0;

    $result = "";

    $request =
"https://secure.vxsbill.com/create_refund.php3?username=$username&password=$password&site
=$site&trans_id=$trans_id&price=$price";

    if ($fp = fopen($request, "r")) {
        while (!feof($fp)) {
            $result .= fgets($fp, 128);
        }
        fclose($fp);
    }

    if (strlen($result) == 0) {
        echo("No reply");
    }

    if (strstr($result, "Error")) {
        echo("Error: $result");
    }

    if (strstr($result, "OK")) {
        $refund_id = substr($result, 4);
        echo("OK: $refund_id");
    }
?>
```
